PATENT PENDING AIR LIGHT
FRONT-END CONSTRUCTION

GLASS COMPOSITE BONDED

Cuetec's AVID shafts are constructed with multi-ply of glass composite bonded to A-grade kiln-dried hard maple. This advanced patent-pending construction and bonding process not only strengthens the AVID shaft, but also increasing the shaft's dynamic stiffness while maintaining the feel and feed-back players require to grow and further develop their game. The .75mm bonded glass composite layers run the entire length of AVID the shaft, each layer is oriented to maximize performance and durability, the result of this layering is a shaft that exhibits the feel of wood, with the longevity and warp resistance of a composite.

AIR LIGHT FRONT-END CONSTRUCTION

Less weight means less deflection. Benefiting from their ultra-strong glass composite wood bonding construction, every AVID shaft features Cuetec's Air Light front-end build. This construction allows the AVID shaft to be bored out more than 10 inches, creating an ultra-rigid cavity with far less mass, resulting in a more accurate and durable shaft.

THIN WHITE SIGHTING FERRULE

At only .375 inches long (9.53mm), the lightweight, thin white sighting ferrule on each AVID shaft not only aids in aim contrast and depth perception, but it also provides a more familiar and stable platform for tip maintenance and replacement over the life of the shaft.

LAMINATED TIGER® EVEREST TIP

Selected for its consistency and neutral hit attributes, each AVID shaft is paired with an Everest tip. Naturally cured for more than a year, each Everest tip is meticulously honed, utilizing a unique vacuum lamination process that ensures the elimination of air between the tip's ten layers. The red wear indicator lets players know when it's time to get their tip changed.

PLAYER'S CHOICE 11.75 / 12.25 / 12.75

Maximizing your game's potential requires being able to tailor your equipment to your individual preferences and needs. All Cuetec AVID cues are available with the player's choice of 11.75mm, 12.25mm, or 12.75mm low-deflection glass-bonded shafts.

ACUEWEIGHT GENERATION II

Developed to further enhance each player's ability to tailor their AVID cue to their game, the second generation Acueweight system utilizes a fused butt cap design allowing for more cavity space and the inclusion of spacers to move the balance point of the cue without adding weight or the need for costly proprietary tools.

DUO SMART EXTENSION READY

Engineered to work with future Cuetec products, every AVID cue arrives equipped with a DUO Extension set compatible bumper installed. Please note AVID cues do not work with the heavier, original Cuetec Smart Extension.
